PROFILE

My name is Anđela, and I am ISTQB certified software tester. Coming from a strong academic background in the economy, I first started working as an auditor. Using software in everyday work I get interested in it. Firstly, I've started with web development to find out how everything works. Soon I realized how important software testing is and that was the moment when my journey began. Some period later I got a job in a fintech company, finished the ISTQB exam and now I'm working in Banca Intesa with the still same passion for testing as in the beginning.

I'm a hard worker, dedicated to resolving tasks hoping that I will get a chance to improve my skills in your company on mutual benefit.
